## SEO & Growth Hacking Basics

The purpose of planning is to  
remain convinced

That a possible path exists *(Pavlina)*

# What's a search engine?

- A. A **software** trained to learn from its users
- B. a big **data archive**
- C. a secret ranking **algorithm**
- D. a **company** with an aim of gaining a profit
- E. a **mass media** with advertising business model

What's political in a search engine?

everything

# Newspaper vs. Google ad sales

In US\$billions

Sources: Newspaper Association of America and Google

*Alphabet and Facebook get almost all of their revenue from ads. Apple, Microsoft and Amazon have more diverse sources of revenue.*

	Apple	Alphabet	Microsoft	Amazon	Facebook	Combined
Market Cap	\$891B	\$819B	\$719B	\$661B	\$547B	\$3,637B
Revenue	\$216B	\$90B	\$85B	\$136B	\$28B	\$555B
Earnings	\$46B	\$19B	\$17B	\$2B	\$10B	\$94B

# CHANGING FORTUNES

— Tech firms are displacing television companies as the biggest sellers of advertising

Global advertising revenue (in \$ bn)

# Global net ad revenue share for digital and mobile in 2017

Digital: \$223.7 billion

Mobile \$141.2 billion

Source: eMarketer

## Revenues and net profits earned in one minute

Based on latest 12 months of available data, \$m

Sources: Bloomberg; *The Economist*

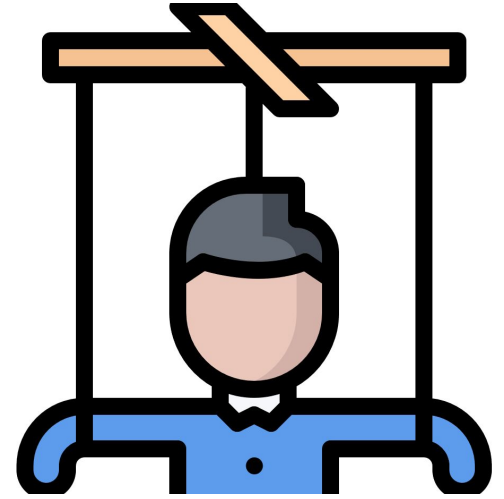

\*Net revenue

search engine political impact

## 1. Search Engine Manipulation Effect

The impact that ordered search results have on thinking and behavior. During a political campaign, when one candidate is favored over another in search results, that shifts the voting preferences of undecided voters toward the favored candidate by 20 percent or more—up to 80 percent in some demographic groups.

## 2. Search Suggestion Effect

The impact that search suggestions have on thinking and behavior as one types a word or phrase into a search box or search bar. Research has shown that by manipulating search suggestions, a search engine company can turn a 50–50 split among undecided voters into a 90–10 split with no one knowing they have been manipulated.

### 3. Targeted Messaging Effect

The impact that targeted messages—that is, messages that are sent to some people but not others—have on a population. In a political campaign, if a social media company sent register-to-vote reminders mainly to members of one political party, more people from that party would register to vote. On Election Day, targeted go-out-and-vote reminders would have a similar impact, and neither manipulation would be detectable by users or authorities unless sophisticated monitoring systems were in place.

#### 4. Opinion Matching Effect

The impact on people's thinking and behavior that occurs when an online service recommends one course of action after asking people some questions. During a political campaign, online matching services ask people about their political views and then, based on their answers, recommend which candidate people should vote for. Prior to an election, opinion matching services tend to attract undecided voters—precisely the kind of voters who are most vulnerable to manipulation. Initial research suggests these services can produce shifts in voting preferences of 30 percent or more without people's awareness.

See also: Dunning–Kruger effect

## 5. Answer Bot Effect

The impact on people's thinking and behavior that occurs when they are given a computer-generated answer to their question. At the moment, such answers are supplied by a variety of personal assistants, as well as by the answer boxes search engines sometimes display above a list of search results. Initial research suggests that answer bots reduce the time people spend searching for more information and that they have a dramatic impact on the views of people who are undecided on an issue.

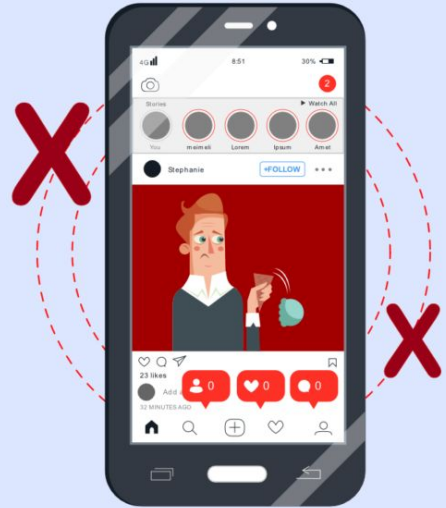

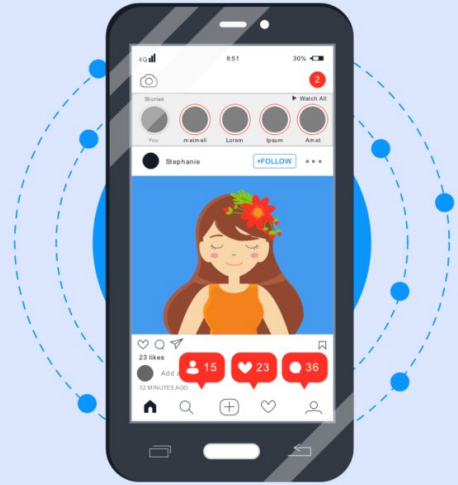

**For every complex problem there is an answer that is clear, simple, and wrong.**

H. L. Mencken

## 6. Shadowbanning

The practice of suppressing some of the messages or tweets people send to other people. Any platform on which someone has followers or friends can reduce his or her influence through such suppression. Because systems that monitor tweets and messages currently don't exist, it is impossible to know for sure when shadowbanning is occurring.

# BANDWAGON EFFECT

THE TENDENCY TO DO (OR BELIEVE) THINGS BECAUSE MANY OTHER PEOPLE DO (OR BELIEVE) THE SAME.

## 7. Programmed Virality and the Digital Bandwagon Effect

The power that big tech platforms have to deliberately accelerate or suppress virality. The Digital Bandwagon Effect is an explosion of support for one viewpoint or candidate that can be engineered by a search engine company.

## 8. The Facebook Effect

The impact that Facebook—presently the largest social-media platform in the world—has on people’s opinions and behavior. Facebook can affect election outcomes in at least five different ways: by biasing its trending box, biasing its center newsfeed, encouraging people to look for election-related material in its search bar, sending out targeted register-to-vote reminders, and sending out targeted go-out-and-vote reminders.

## 9. Censorship

Suppressing content in a way that favors one viewpoint. Google suppresses content in at least nine different ways. Sometimes the suppression is obvious; most of the time it is invisible. In 2016, a Facebook whistleblower claimed he had been on a company team that was systematically removing conservative news stories from Facebook's newsfeed. Evidence shows that both conservative and liberal content is sometimes suppressed, often without explanation.

## 10. The Digital Customization Effect

The increased impact on people's opinions and behaviors that occurs when manipulations are customized to match the needs, preferences, and backgrounds of individual users. Google has likely collected the equivalent of millions of Word pages of information about many of its users, and Facebook also maintains extensive individual profiles. When manipulations make use of such information, they have a greater impact.

But who cares? It's free!

How does it work for advertisers?

# What we will learn today

Google  
Ranking  
Top 10  
SERP

Ranking factors

Links, Content, Html Template,  
Crawlability, URL Status code,  
<malware>, Hosting & Database Uptime,  
Domain & DNS

websites are  
made of this

# Google's recipe to build rankings

[bit.ly/inbou](https://bit.ly/inbou)

## Correlations With High Ranking On Google

1) Know Google ranking factors

2) Divide into tasks

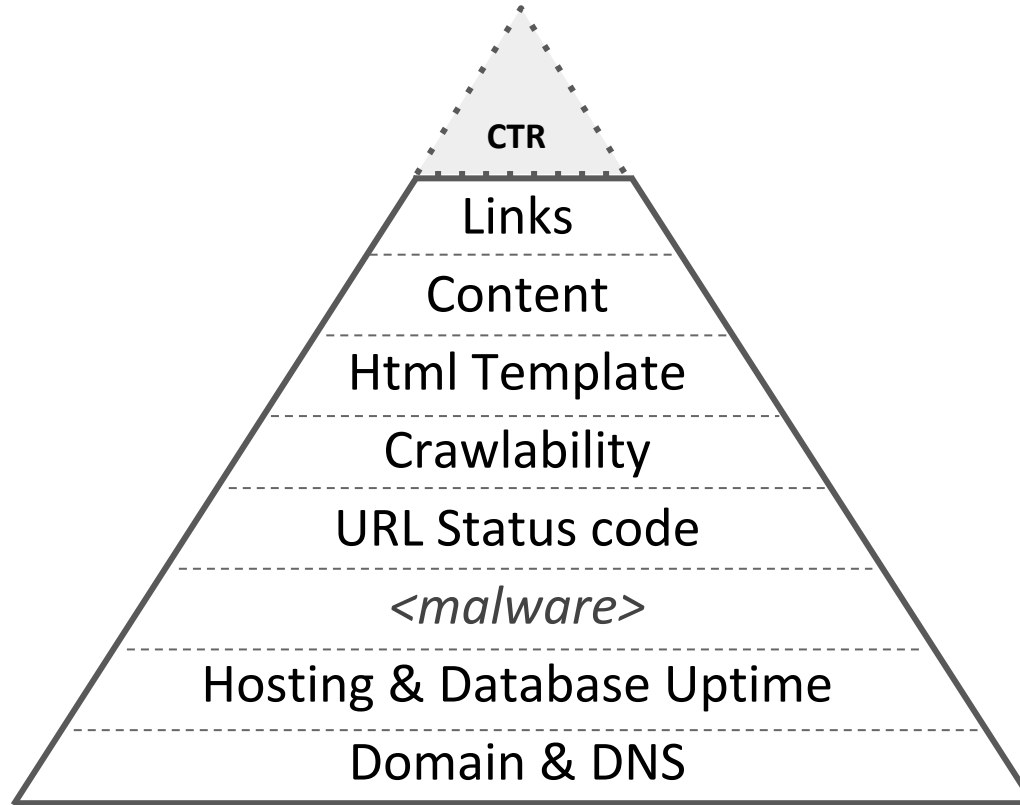

3) Assign Importance

4) Assign Priority

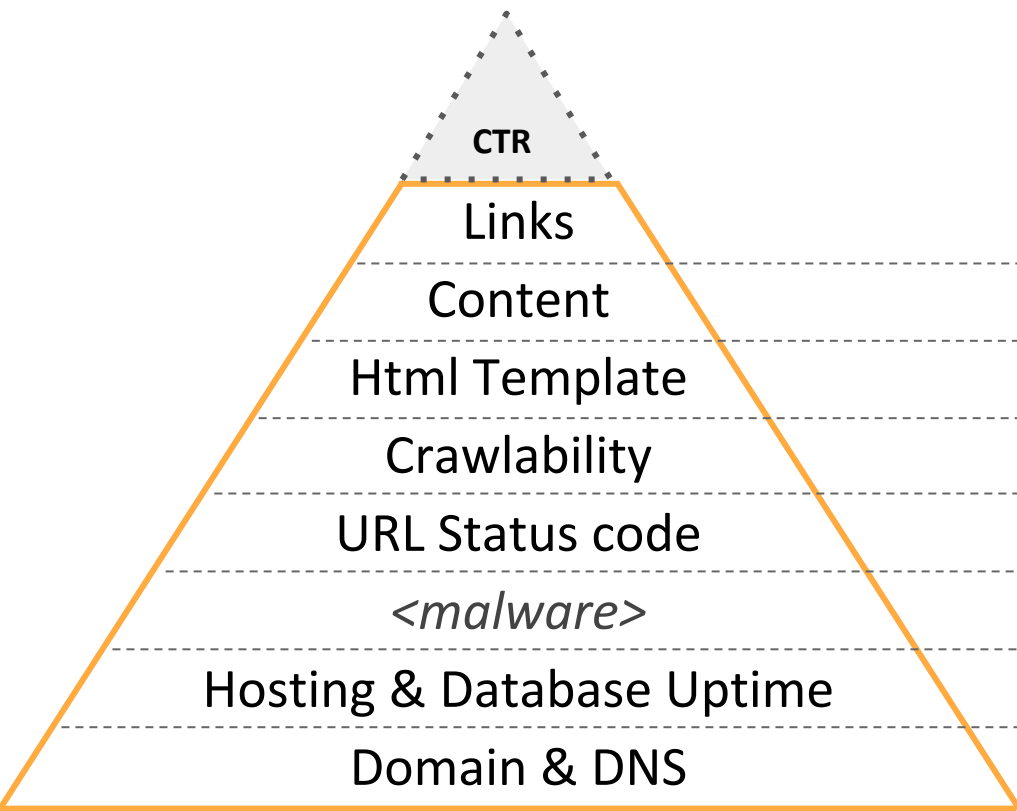

5) Teams & time management

## CTR for Non-Branded Queries

Position on Google

Tasks
Create new Links by number and quality
Create keyword focused pages for each user Intent
Calculate template rank and internal link structure
Count number of crawlable urls
Verify "ok" status code for each URL
Avoid like hell
Provide high Uptime %
Calculate domain Age, authority, focus intent

1) Know Google ranking factors

2) Divide into tasks

3) Assign Importance

4) Assign Priority

5) Teams & time management

## Severity Assessment using competitor benchmark

Area	What to check	Top 3 competitor benchmark
Links (ext.)	<b>Links number and quality</b>	At least <b>70%</b> of competitors
Content, Title, Desc	<b>% of keyword focused pages</b>	At least <b>50%</b> of website
Html Template & structure	<b>Template rank</b>	At least <b>40%</b> of competitors
Crawlability	<b>n. of total crawlable urls</b>	At least <b>40%</b> of competitors
URL Status code	<b>% of urls with “200” (ok) status</b>	At least <b>95%</b>
<malware>	<b>Avoid like hell</b>	
Hosting & Database Uptime	<b>Uptime %</b>	At least <b>99.9%</b> (8h yearly offline)
Domain & DNS	<b>Age, authority, focus intent</b>	At least <b>50%</b> of competitors

## Quick Severity Assessment

Area	Tools	Hierarchy	Benchmark
Links (ext.)	<b>LRT, Majestic</b>	<b>8</b>	From <b>1</b> to <b>9</b>
Content, Title, Desc	<b>SEOzoom, Semrush</b>	<b>7</b>	From <b>1</b> to <b>9</b>
Html Template & structure	<b>Audisto, SEOzoom</b>	<b>6</b>	From <b>1</b> to <b>9</b>
Crawlability	<b>Search console, site:</b>	<b>5</b>	From <b>1</b> to <b>9</b>
URL Status code	<b>Screaming frog</b>	<b>4</b>	From <b>1</b> to <b>9</b>
<i>&lt;malware&gt;</i>	<b>Search console</b>	<b>3</b>	<b>1</b> if present
Hosting & Database Uptime	<b>Uptimerobot, pingdom</b>	<b>2</b>	From <b>1</b> to <b>9</b>
Domain & DNS	<b>Webarchive, Moz</b>	<b>1</b>	From <b>1</b> to <b>9</b>

1) Know Google ranking factors

2) Divide into tasks

3) Assign Importance

4) Assign Priority

5) Teams & time management

**(Hierarchy + Benchmark) x Time = Priority**

<b>Example task</b>	<b>H+B</b>	<b>Time (days)</b>	<b>Priority (smaller = higher priority)</b>
Meta title A	7+1	2	16
Fix 404	4+1	4	20
Meta title B	7+1	3	24
External link	8+1	1	9

# Content purpose

Especially in the B2B world where long buying cycles mean that the role of content is stretched over a wide length of time, it's absolutely essential for marketers to employ all five classes of content, each of which has its own specific purpose, or desired effect on your buyer. When used in its entirety, the content with a purpose framework ensures that you engage with prospects in all the ways you need to engage with them in order to convert them. As a result, you establish a more relevant and powerful connection with buyers, from understanding your product and company to feeling good about your company, and finally to being motivated and inspired to act.

Writer's job is  
in the white space

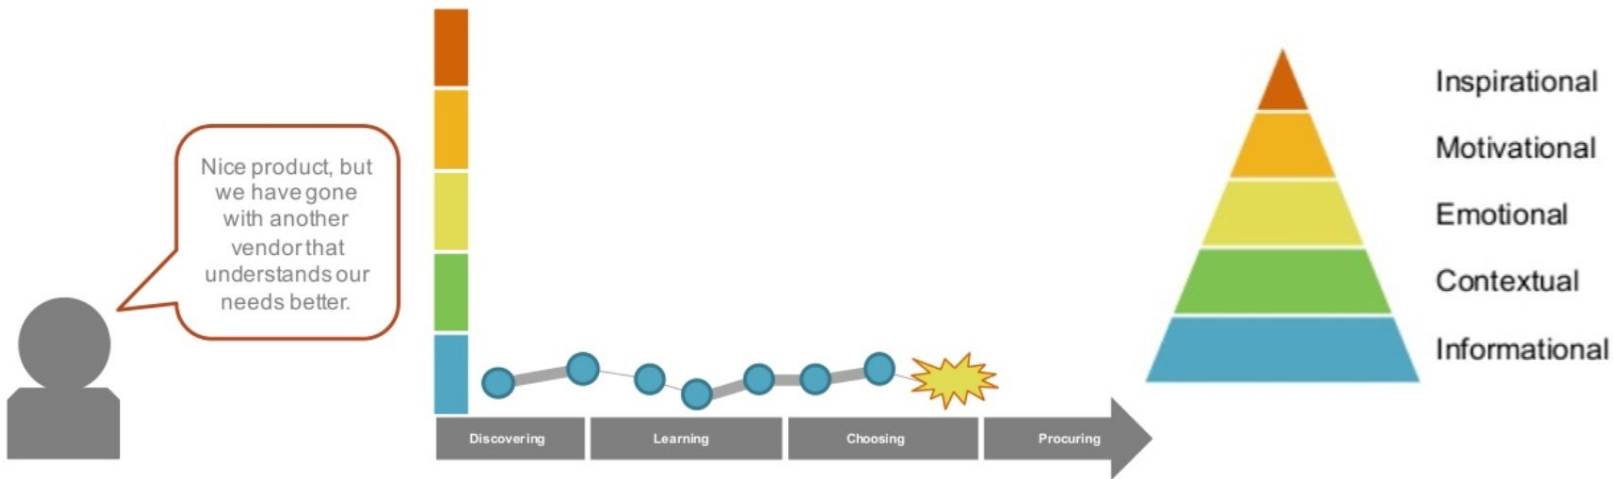

[jeff freund](#)

## Pitfall #1

### Only Information Content

You may focus purely on informational content, so your product may sound great to the buyer, but they leave in Choosing as they find another provider that appears to understand their business challenges and market place better.

## Pitfall #2

## No Emotional Connection

You provide both informational and contextual content, but you have no emotional connection to the buyer so they exit very late in the sales process. In fact, you may be left guessing as to why they chose a different product because they simply disappeared.

I just don't feel good or excited about your company.

## Pitfall #3

### All Fluff

You provide too much fluff content, and your buyer immediately leaves in Learning because the content lacks specificity and product details. In fact, you will likely never even know this buyer exists because they will not choose to engage before looking elsewhere to solve their business needs.

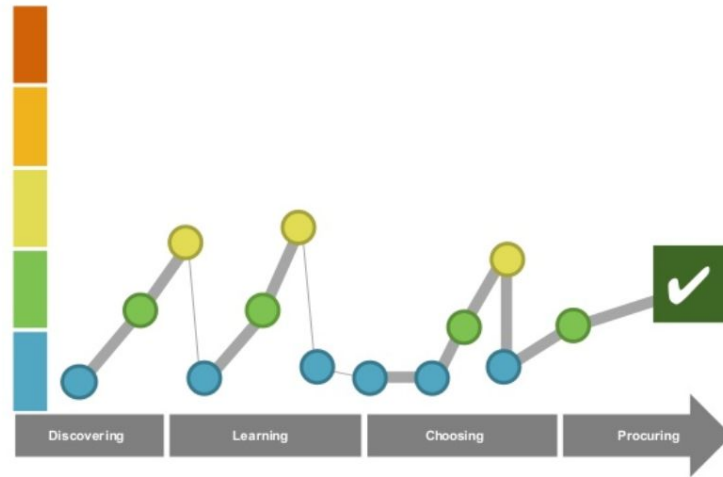

I don't understand what your product can do.

# Success #1

## Connecting Emotionally

You provide buyers with informational and contextual content and start to establish an emotional connection as well.

## Success #2

## Unlock the Status Quo

You provide motivational content on top of establishing an emotional connection and a foundation of trust and credibility, thereby spurring buyers into action that were previously stuck in their buying process.

We weren't ready to move on this, but now we are.

Inspirational  
Motivational  
Emotional  
Contextual  
Informational

## Success #3

## Content Nirvana

You engage your buyer leveraging every class of content up through motivational and inspirational, and the buyer gloriously declares that they are ready to work with you.

Let's find a way to do business together.
